## 技术规格

Background:	This gene encodes a member of the sirtuin family of proteins, homologs to the yeast Sir2 protein. Members of the sirtuin family are characterized by a sirtuin core domain and grouped into four class es. The functions of human sirtuins have not yet been determined; however, yeast sirtuin proteins a re known to regulate epigenetic gene silencing an d suppress recombination of rDNA. Studies sugge st that the human sirtuins may function as intrace llular regulatory proteins with mono-ADP-ribosyltra nsferase activity. The protein encoded by this gen e is included in class I of the sirtuin family. Two a lternatively spliced transcript variants that encode different proteins have been described for this ge ne.
